

Special Issue

Smart Home Design, 2nd Edition

Message from the Guest Editors

A smart home is a place that is equipped with information technology and computing; it can accept as well as respond to the resident's requests. Its main purpose is to provide the resident with a comfortable and convenient life through the managing of various technologies at home. A smart home system supports the control of several different systems in a household (e.g., heating, air conditioning, security, lighting, and audio/video systems) and is labeled accordingly. As more and more home appliances and consumer electronics are deployed, the power consumption of the home (i) tends to increase and (ii) leads to an increase in the risk of a power blackout. As a result, an intelligent smart home energy management system, which is responsible for observing and handling the working operations of home appliances, is needed for smart homes. This Special Issue focuses on original research and literature reviews from different areas related to their system design, analysis, operation, simulation, and control of power. Manuscript submissions in the areas mentioned are highly encouraged.

About the Journal

Message from the Editor-in-Chief

Designs (ISSN 2411-9660) is a peer-reviewed and open access journal which provides a unifying research framework for a wide range of engineering designs of disciplines and industrial applications, including mechanical engineering, electrical engineering, civil engineering, mechatronics, aerospace engineering, bioengineering, energy engineering, industrial engineering and manufacturing systems are of interest. We would like to invite you to contribute to the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Joshua M. Pearce

Department of Electrical & Computer Engineering, Western University,
London, ON N6A 3K7, Canada

Author Benefits

High visibility

: indexed within Scopus, Inspec, Ei Compendex and other databases.

Journal Rank:

CiteScore - Q2 (Engineering (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.3 days after submission; acceptance to publication is undertaken in 4.6 days (median values for papers published in this journal in the first half of 2025).
