

Special Issue

Noncoding RNAs as Players, Biomarkers and Targets in Diabetes

Message from the Guest Editor

Noncoding RNAs (such as microRNAs, lncRNAs and circular RNAs) have a variety of functions in normal physiology, and take part in the regulatory mechanisms which are deregulated in metabolic disease. Their specific profiles in body fluids, such as plasma and serum, has led to the search for RNA-based biomarkers of disease, in particular diabetes and its co-morbidities. Additionally, the relative ease of manipulation of their function, e.g., by means of complementary oligonucleotides, has underscored their potential as therapeutic targets. In this Special Issue of *Diabetology*, we invite researchers to submit original research or review articles focusing on the various classes of ncRNAs as mechanistic effectors, biomarkers and/or therapeutic targets in diabetes and/or its co-morbidities.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Peter Clifton

1. Division of Health Sciences, School of Pharmacy and Medical Sciences, University of South Australia, Adelaide, SA, Australia
2. Alliance for Research in Exercise, Nutrition and Activity (ARENA), Adelaide, SA, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus, EBSCO, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 23.4 days after submission; acceptance to publication is undertaken in 5.4 days (median values for papers published in this journal in the second half of 2024).
