Message from the Guest Editors

Neuroimaging in the triage of ischemic stroke has significantly evolved over the past few years, especially regarding the timely identification of patients benefiting from thrombolytic and endovascular treatment. New imaging techniques have been established, such as automated computed tomography (CT) perfusion tools, or spectral CT techniques. Neuroimaging is increasingly used to guide a patient-specific individual treatment, rather than selection for treatment by rigid criteria. Nonetheless, different diagnostic approaches for stroke triage exist in different stroke centers. The aim of this Special Issue is to discuss recent advances in diagnostic approaches in stroke imaging. Research data, new concepts, and discussions of potential interventions that modify disease response in an ischemic stroke context will be considered. Original papers, systematic reviews, and meta-analyses are welcome.

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [Embase](#), [Inspec](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)
