Message from the Guest Editor

Endoscopic ultrasound-guided fine-needle aspiration (EUS-FNA) has become widely used in clinical practice. Primarily, EUS-FNA is used for the histological diagnosis and cytodiagnosis of pancreatic diseases, lymph node lesions, and submucosal tumors. Recently, it has been widely used for hepatic lesions, biliary tract diseases, cystic lesions, and perivascular lesions. Improvements in the use of needles, such as an endoscopic ultrasound-guided fine-needle biopsy for genomic panel diagnosis have also been attempted to collect more tissue.

On the other hand, needle tract seeding after EUS-FNA has been sporadically observed in previous reports. Furthermore, the issue of the diagnostic ability in pancreatic carcinoma in situ and micropancreatic carcinoma has also come to light. This Special Issue will focus on the current knowledge, issues, and limitations of EUS-FNA use.

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Medicine, General & Internal*)
