Message from the Guest Editor

In recent years, the landscape of treatment of lung and pleural neoplasms has been revolutionized by new treatments, mainly represented by target therapies and immunotherapy. PET scan and CT scan are contributing to response assessment during these treatments via a different evaluation with respect to classical dimensional RECIST criteria.

Indeed, the introduction of i-RECIST (immune-RECIST) and revised m-RECIST for Pleural Mesothelioma represent criteria of response assessment tailored to the treatment and type of neoplasms.

This Special Issue will focus on the role and new aspects of diagnostic management during these treatments, with the awareness that a multidisciplinary contribution could help to achieve a better outcome for patients.

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)
