Message from the Guest Editor

Primary and metastatic tumors of the spine are demanding lesions in terms of diagnosis and management because they are often asymptomatic or have non-specific characteristics. Delayed diagnosis is not very unusual, and sometimes spinal instability or neurological compromise may be the presenting symptom. Optimal diagnosis and treatment of spine tumors require a multidisciplinary approach and thorough knowledge of both spinal surgery and musculoskeletal oncology. This Special Issue highlights the relevance of spinal tumors, particularly related to diagnostic parameters and innovative approaches.
