Cardiovascular Imaging

Message from the Guest Editors

This Special Issue aims to present the role of noninvasive imaging modalities in the diagnosis and imaged-based therapeutic management of cardiovascular diseases, with particular attention being paid not only to the standard of care but also to the relevant developments for the near future. We encourage authors to submit both preclinical and clinical studies in this field. Clinical studies may include systematic reviews/meta-analyses, retrospective studies, and prospective studies emphasizing the role of and need for imaging techniques in primary diagnosis, treatment response, and disease relapse.
