Imaging of Macular and Retinal Diseases

Message from the Guest Editor

Different diseases affecting the retina have typical characteristics that can be identified by assessing the fundus of the eye. Imaging technologies provide accurate images of the retina, as well as quantitative data, and have become common tools to diagnose and monitor macular and retinal disorders in clinical practice. New techniques, algorithms or programs can optimize the performance of these instruments. Moreover, the combination of different imaging modes can also increase the precision of these devices to detect changes in the retina and evaluate the response to medical or surgical treatments. High-resolution images of the retina offer valuable information that allows clinicians and researchers to better understand the pathophysiology of retinopathies. Consequently, the possibilities and full applications of imaging technologies for the retina are yet to be discovered. The objective of this Special Issue is to update the current knowledge about the use of imaging techniques in the field of the retina.

About the Journal

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Andreas Kjaer

Department of Clinical Physiology, Nuclear Medicine & PET National University Hospital, Rigshospitalet, University of Copenhagen, Blegdamsvej 9, DK-2100 Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
