Diagnostic Radiology in Head and Neck Diseases

Message from the Guest Editor

Computed Tomography (CT) and Magnetic Resonance Imaging (MRI) play important roles in the assessments of various head and neck diseases, both neoplastic and non-neoplastic. This Special Issue aims at providing a sample of latest advances in the field. Contributions may be, therefore, related, but not necessarily limited, to novel applications of established techniques used in other parts of the body, new MRI sequences, dual-energy CT, and imaging the results of cutting-edge treatment as well as unusual conditions. Brief reports, review articles, and original research are all welcome.
