Artificial Intelligence in Health Monitoring and Diagnosis: AI Meets Conventional Models

Message from the Guest Editor

AI has revolutionized the medical industry and has become an unstoppable force, delivering numerous benefits. However, even in the presence of huge amounts of data collected by sensors, IoT, and imaging devices, AI often fails when applied to unknown data. For example, many neural networks are able to find signs of cancer in mammograms but cannot tell the difference between a rectangle and a triangle. Therefore, this Issue invites research on diagnostic and monitoring systems that combine AI with applications representing different aspects of human intelligence. Papers could include topics such as the hybrids of the neural networks and super pixels or deep learning and level-set methods in image processing, i.e., when conventional models meet AI. We accept research articles, position papers, short communications, critical reviews, and comments. Papers may concern (but are not limited to) AI and AI hybrids for health monitoring and diagnosis, medical image segmentation, pattern recognition, data fusion, data mining, transfer learning, deep reinforcement learning, genetic and biologically inspired algorithms, artificial life, and edge and cloud computing.

About the Journal

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Andreas Kjaer

Department of Clinical Physiology, Nuclear Medicine & PET National University Hospital, Rigshospitalet, University of Copenhagen, Blegdamsvej 9, DK-2100 Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.6 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
