Lung Involvement in Connective Tissue Disease: Advances in Diagnosis and Management

Message from the Guest Editor

Interstitial lung disease (ILD) is a frequent complication of connective tissue disease (CTD), which has a significant impact on morbidity and mortality. Although ILD is reported in all CTDs, there is substantial variability in the prevalence and pattern of ILD subtypes. Significant work has been undertaken to better characterise ILD prevalence, risk factors, and frequency of specific CT patterns, as well as to establish treatment guidelines. However, rheumatologists are faced with several challenges, as follows: (a) the precise mechanisms that drive CTD-ILD remain unclear; (b) it is easy to miss ILD diagnosis as symptoms are frequently masked by the rheumatic condition; (c) except for systemic sclerosis, there is no standard protocol for screening and assessing disease progression and there are no effective methods or biomarkers to determine whether the patient's deterioration is due to the progression of ILD or other reasons, such as infection or drug-induced causes; and (d) CTD-ILD is difficult to treat, requiring vigorous effort and a multidisciplinary team.

About the Journal

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Andreas Kjaer
Department of Clinical Physiology, Nuclear Medicine & PET National
University Hospital, Rigshospitalet, University of Copenhagen,
Blegdamsvej 9, DK-2100 Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
