

## Special Issue

# Pathology and Diagnosis of Head and Neck Diseases

### Message from the Guest Editor

Unlike all organs and systems, the head, neck, and oral cavity constitute a complex and extremely heterogeneous district comparable to a real miniature organism. The pathologies in the head and neck are of different natures, including inflammatory, immune, lymphomas, bone stromal and odontogenic neoplasms, epithelial carcinomas, HPV-related ones, and salivary gland tumors. In the era of personalized and precision medicine, this district offers very broad fields of application for new diagnostic techniques, including AI and molecular analysis, as well as future clinical and pharmacological trials. This Special Issue aims to collect original manuscripts investigating head and neck disease through new diagnostic-therapeutic approaches and to allow researchers to discuss new research developments.
