# Cardiovascular Diseases: Innovations in Diagnosis and Management

### Message from the Guest Editor

Various studies on the prognosis of myocardial infarction are currently underway. Among these, new directions are being rapidly established in guidelines across different regions.

**Improvement of prognostic prediction models:** Recent studies are advancing the development of models that use patients' specific biomarkers and genetic profiles to more accurately predict individual patient outcomes.

**Association with inflammation:** Inflammation markers have been shown to play an important role in predicting the risk of myocardial infarction.

**Optimization of treatment strategies:** Drug therapies such as antiplatelet therapy and statins are known to reduce the risk of myocardial infarction, but recent studies are exploring ways to optimize these treatment strategies.

These topics reflect important research findings aimed at improving the prognosis of patients following myocardial infarction.

Additionally, new biomarkers have emerged as promising indicators for diagnosing myocardial infarction and predicting prognosis. Combining these markers with traditional indicators is expected to enhance risk assessment and optimize treatment strategies for patients.

## About the Journal

### Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

---

### Editor-in-Chief

Prof. Dr. Andreas Kjaer  
Department of Clinical Physiology, Nuclear Medicine & PET National  
University Hospital, Rigshospitalet, University of Copenhagen,  
Blegdamsvej 9, DK-2100 Copenhagen, Denmark

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
