Imaging Biomarkers for Pachychoroid Spectrum Disease

Message from the Guest Editors

Pachychoroid spectrum disease (PSD) encompasses a set of macular disorders secondary to an abnormally thick choroid, including pachychoroid pigment epitheliopathy, focal choroidal excavation, peripapillary pachychoroid syndrome, central serous chorioretinopathy, pachychoroid neovascularopathy, and polypoidal choroidal vasculopathy, to name a few.

Multi-model imaging has been employed to investigate the mechanism, severity, and prognosis of PSD, which includes optical coherence tomography (OCT), OCT angiography (OCTA), and indocyanine green angiography. Meanwhile, several imaging biomarkers are introduced to achieve the purpose set out above, for example, subfoveal choroidal thickness and choroidal vascular index. At the same time, artificial intelligence (AI) deep learning is gradually being integrated into the selection of effective evaluating parameters.

The purpose of this Special Issue is to investigate the latest effective imaging biomarkers for PSD, expecting to better reveal its underlying mechanism, assess its severity, and predict its prognosis. Moreover, we would also like to include the novel research on AI deep learning in this field.

About the Journal

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Andreas Kjaer
Department of Clinical Physiology, Nuclear Medicine & PET National
University Hospital, Rigshospitalet, University of Copenhagen,
Blegdamsvej 9, DK-2100 Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
