# New Perspectives in Diagnosis and Management of Eye Diseases

### Message from the Guest Editor

In the last few years, the ophthalmological world has been revolutionized by technological advances in the diagnosis and management of eye diseases. The new generation of non-invasive diagnostic tools, such as spectral domain optical coherence tomography (OCT) and OCT angiography, has dramatically improved the timing and accuracy in the diagnosis of severe retinal diseases, such as age-related macular degeneration, diabetic retinopathy, macular pucker, macular hole, retinal detachment, etc. The aim of this Special Issue is to describe “the state of the art” and updates in the diagnosis and management of ophthalmological diseases, focusing on new diagnostic and therapeutic perspectives.
