Artificial Intelligence in Image-Based Screening and Diagnostics of Pulmonary Tuberculosis

Message from the Guest Editors

Early screening and diagnosis play a crucial role in increasing the survival rate of patients with tuberculosis. There are several diagnostic methods, including the slow sputum culture, tissue biopsy analysis, as well as the WHO-recommended Xpert MTB/RIF, Xpert Ultra, and TrueNAT assays. Radiographic imaging methods such as computed tomography (CT) and chest-X-rays (CXR) are also widely used for screening and diagnosis. Research on using artificial intelligence (AI) and machine learning (ML) methods for image-based screening and diagnostics of pulmonary TB has gained significance because they offer the promise of alleviating the human burden in screening in countries that lack adequate resources.

Through this Special Issue, “Artificial Intelligence in Image-Based Screening and Diagnostics of Pulmonary Tuberculosis”, we aim to include primary research studies and literature reviews focusing on the novel AI/ML methods and their application in the screening and diagnosis of pulmonary MDR- and drug-sensitive TB.

About the Journal

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Andreas Kjaer
Department of Clinical Physiology, Nuclear Medicine & PET National
University Hospital, Rigshospitalet, University of Copenhagen,
Blegdamsvej 9, DK-2100 Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
