Revealing the Diagnostic Pathway of Injuries, Degenerative and Metastatic Disease in the Cervical Spine

Message from the Guest Editor

Cervical spine injuries in traffic accident victims with skull fractures are common. Most lesions are soft-tissue injuries. Plain radiograms fail to show many fractures and virtually all soft-tissue lesions. Uncovertebral injuries are common, both with disc ruptures and as isolated lesions. Cartilaginous end-plate avulsions are typical lesions in adolescents. Most cervical spine injuries are not detected during autopsies. Anterior locking screw-plate systems provide excellent stability and facilitate uneventful healing of anterior fusions. Ancillary posterior fixation entails restricted neck mobility, pain, mechanical conflict with facet joints and extended fusions. Posterior articular pillar screw fixation always carry risk for lesions of the segmental nerves and blood vessels. The cryoplaning technique provides an excellent approach to anatomical and morphometric studies.

About the Journal

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Andreas Kjaer

Department of Clinical Physiology, Nuclear Medicine & PET National University Hospital, Rigshospitalet, University of Copenhagen, Blegdamsvej 9, DK-2100 Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
