Special Issue

Usefulness of Contrast-Enhanced Harmonic Endoscopic Ultrasound for Pancreatic Cancer

Message from the Guest Editor

Endoscopic ultrasonography (EUS) is thought to be one of the most useful modalities for the diagnosis of pancreatic diseases because its spatial resolution is superior to any other modality. However, EUS is inferior to other modalities in terms of hemodynamic assessment. Contrast-enhanced harmonic EUS (CH-EUS) allows for vascular assessment of pancreatic lesions thanks to the advent of the second generation of ultrasound contrast agents. In particular, CH-EUS is reported to be useful for the diagnosis of pancreatic cancer due to its capacity to differentiate between tumor types with high sensitivity based on differences in contrast effects. CH-EUS is also reportedly useful for staging of pancreatic cancer. Recently, CH-EUS has not only been used for diagnosis, but its usefulness in performing EUS-FNA for pancreatic cancer has also been reported. In addition, CH-EUS is reported to be useful for evaluating chemotherapy for pancreatic cancer. Therefore, CH-EUS is currently used not only in diagnosis but also in various fields of treatment of pancreatic cancer. The aim of this Special Issue is to collect new data and evidence on the usefulness of CH-EUS for pancreatic cancer.

About the Journal

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Andreas Kjaer

Department of Clinical Physiology, Nuclear Medicine & PET National University Hospital, Rigshospitalet, University of Copenhagen, Blegdamsvej 9, DK-2100 Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
