Current Issue and Perspectives in Dermatopathology

Message from the Guest Editors

Dermatopathological diagnostics embraces a large amount of information, as pathologies of different natures can occur at the skin level: inflammatory, immune, and accumulation pathologies, histiocytosis, and neoplastic pathologies proper. Although molecular biology is promising as a tool, dermatopathological diagnostics is still fully based on morphology and ancillary immunohistochemical techniques. In this Special Issue, we aim to collect case reports, case series, editorials, letters to the editor, original articles, and reviews that can help pathologists in daily diagnostics as well as provide a basis on which to start new insights and discoveries.
