Special Issue

Machine Learning Applications for COVID-19 and Its Complications: Screening, Diagnosis, Treatment, and Prognosis

Message from the Guest Editor

Machine learning methods are increasingly being used in medicine, including in the study of COVID-19. With increasing computing power and the growing relevance of big data in medicine, machine learning is expected to play an important role in clinical practice. I would like to invite you to participate in this very exciting Special Issue on "Machine Learning Applications in COVID-19 and Its Complications: Screening, Diagnosis, Treatment, and Prognosis", with a focus on the use of machine learning algorithms to investigate how symptoms, clinical, demographic, laboratory, radiological imaging variables contribute to the diagnosis and prognosis of COVID-19. Examples of possible machine learning applications include, but are not limited to: i) diagnosis and prognosis of COVID-19 clinical outcomes (such as mortality and escalated care), ii) in-hospital acquired diagnosis (such as AKI and ARDS), iii) treatments (such as mechanical ventilation, steroids, and anticoagulants), and vi) diagnosis and prognosis post-acute COVID-19 sequelae. Studies on other related topics are also welcomed.

About the Journal

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Andreas Kjaer
Department of Clinical Physiology, Nuclear Medicine & PET National University Hospital, Rigshospitalet, University of Copenhagen, Blegdamsvej 9, DK-2100 Copenhagen, Denmark

Author Benefits

High Visibility:
indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:
JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)

Rapid Publication:
manuscripts are peer-reviewed and a first decision is provided to authors approximately 21 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
