The Use of Motion Analysis for Diagnostics

Message from the Guest Editors

Gait analysis and, more generally, motion analysis have been at the center of scientific research in recent decades for several purposes and in several forms: gait analysis labs have been used to analyze gait patterns, inertial measurement units have been employed to perform analysis in non-hospital settings, and there are also researchers who have designed new wearable systems known as “e-textile”. Indeed, these types of measurements allow clinicians to obtain a quantitative evaluation of motion of patients, supporting them in so-called clinical decision making since there are things that cannot be assessed through medical visits and clinical scales. There is proof in literature that the data acquired by these systems can be used to study diagnosis/prognosis with the implementation of artificial-intelligence-based techniques. Therefore, this Special Issue welcomes all the papers and reviews of literature dealing with motion analysis and diagnosis/prognosis (with and without artificial intelligence solutions).

About the Journal

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Andreas Kjaer
Department of Clinical Physiology, Nuclear Medicine & PET National
University Hospital, Rigshospitalet, University of Copenhagen,
Blegdamsvej 9, DK-2100 Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
