# Advances in Diagnosis and Management of Endometrial Cancer

### Message from the Guest Editor

Endometrial cancer is the most common gynecological malignancy and the fourth most common cancer in women in developed countries. The incidence and mortality of endometrial cancer are increasing due to the aging population, obesity epidemic, and lack of effective screening methods. Endometrial cancer is a heterogeneous disease with different histological subtypes, molecular alterations, and clinical outcomes. We invite researchers and clinicians to submit original research articles, reviews, and commentaries that will contribute to the advancement of the field of endometrial cancer.
