Diagnosis and Management of the Spine and Lower Extremity in Orthopedics

Message from the Guest Editor

Many orthopedic disorders in children and adults are located in the spine or lower extremities. There is often a connection between these disorders, for instance, a leg length discrepancy and the spine. This issue addresses all aspects of the spine and lower extremities with respect to the orthopedic fields. This includes the spine, the hip, the pelvis and the lower extremity. Reports on diagnosis, therapy and analysis are welcomed as well as clinical reports on conservative or surgical treatment. Therefore, we invite researchers to contribute to this Special Issue with original research articles, review articles and meta-analyses focusing on the topics mentioned above.
