Peripheral Arterial Disease: Diagnosis, Treatment and Follow-Up

Message from the Guest Editor

Peripheral arterial disease (PAD) is known for impaired walking distance, ischemic rest pain and ulcers that hardly heal. Worldwide, the prevalence is between 3 and 12%, and its incidence is increasing. Due to developments in endovascular devices and techniques, treatment options have been increased in the last two decades. However, the vulnerability and the multimorbidity of this patient population, calcified lesions and multilevel disease make PAD still challenging to treat. Early detection of PAD may help in preventing progression into chronic limb-threatening ischemia. Once at that stage, treatment is more difficult and major amputation may be inevitable for some patients. Even when treated, restenosis can develop, ulcers can get infected and minor amputation may be necessary. The whole spectrum from pathophysiology to diagnosis, treatment and follow-up requires improvement to enhance outcomes for patients. This *Diagnostics* Special Issue deals with the above-mentioned aspects of PAD. Research related to PAD that addresses imaging technologies, diagnostic tools, clinical applications or risk factor analysis are the focus of this Special Issue.

About the Journal

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Andreas Kjaer
Department of Clinical Physiology, Nuclear Medicine & PET National
University Hospital, Rigshospitalet, University of Copenhagen,
Blegdamsvej 9, DK-2100 Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
