

## Special Issue

# Temporomandibular Joint Diseases: Diagnosis and Management

### Message from the Guest Editor

The aim of this Special Edition is to bring updated information regarding all methods of diagnosis of TMD, from clinical exams to immunohistologic and molecular diagnosis and novel treatments for this disease, ranging from non-invasive techniques, such as physical therapy, ultrasound, low-level laser therapy, and splints, to minimally invasive techniques, such as corticosteroid injections, arthrocentesis of the joint, with or without platelet-rich plasma or hyaluronic acid injections, and arthroscopic surgery, to invasive procedures for the more advanced stage of TMD, which include discectomy, disc replacement, and total joint replacement.
