Clinical Diagnosis and Treatment of Chronic Pain

Message from the Guest Editors

This Special Issue is aimed at researchers investigating the diagnosis of chronic pain processes including imaging and neuroimaging tests, somatosensory assessments, clinical prediction models, reviews dealing with chronic pain diagnosis, pain subclassifications, etc., as well as those dealing with chronic pain treatments after a more precise and updated diagnosis with respect to large groupings of chronic pain populations that continue to be labelled under the word “non-specific”. With this Special Issue we hope to shed light on this important subject where chronic pain itself is already understood as a clinical entity in itself.
