# Dental Peri-Implant Point-of-Care Tests

### Message from the Guest Editor

Dear Colleagues:

Currently, the diagnosis of both periodontal and peri-implant diseases is mainly based on the clinical measurement of pocket depths, attachment loss, and bleeding on probing, together with radiographic examination. These diagnostic procedures can assess only past tissue destruction and do not provide any information about the current disease states and activities or future risk of progression. Therefore, the need for potential biomarkers emerges in order to screen the susceptible sites and patients in order to intervene in a timely manner and prevent irreversible periodontal and dental peri-implant tissue destruction in both periodontitis and dental peri-implantitis.

In view of the latest advances in translational research on periodontal and peri-implant disease biomarkers, point-of-care technologies are emerging as new tools to target periodontitis and peri-implantitis. In particular, these technologies could help to pinpoint the crucial transition of gingivitis or subclinical periodontitis without clinical or radiographic manifestations to active periodontal disease, with progressive deepened pockets and attachment loss.

## About the Journal

### Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

---

### Editor-in-Chief

Prof. Dr. Andreas Kjaer  
Department of Clinical Physiology, Nuclear Medicine & PET National  
University Hospital, Rigshospitalet, University of Copenhagen,  
Blegdamsvej 9, DK-2100 Copenhagen, Denmark

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
