Clinical Diagnosis and Treatment of Mouth Diseases

Message from the Guest Editor

Mouth diseases are currently being studied by both dentists and doctors as they are frequently linked to systemic diseases. An early and accurate diagnosis is important for the treatment of more aggressive diseases. Treatment of mouth diseases can be pharmacological or surgical and can lead to partial loss of the jaw bones. Frequent diseases such as tooth decay and periodontal disease can also require complex treatments. This Special Issue aims to contribute to the correct diagnosis and treatment of mouth diseases, and we welcome submissions on, but not limited to, stomatitis, caries, periodontal disease, oncological diseases, temporomandibular joint pathologies, malocclusions, and all possible therapies.
