Early Diagnosis of Pancreatic Cancer

Message from the Guest Editors

Pancreatic cancer (PC) has a poor prognosis, because the diagnosis of PC is delayed. To improve the poor prognosis, early diagnosis is needed. For early diagnosis of PC, patients with clinical manifestations suggestive of PC and high risks for developing PC need to be selected for examination for PC. The signs suggestive of PC, such as abdominal symptoms, DM onset, or acute pancreatitis should not be missed, and the detail of risks for PC including IPMN, chronic pancreatitis, or heredity of PC should be understood. For diagnosing PC, computed tomography, magnetic resonance imaging, and positron emission tomography could be selected, while the diagnostic ability of these examinations for early stage PC is limited. Recently, endoscopic diagnostic procedures, such as endoscopic ultrasonography, including fine-needle aspiration has been widely accepted for diagnosing PC, including small PC, and endoscopic retrograde pancreatocholangiography using serial pancreatic-juice aspiration cytologic examination has been developed for a detailed examination to diagnose earlier pancreatic cancer, including carcinoma in situ.

About the Journal

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Andreas Kjaer
Department of Clinical Physiology, Nuclear Medicine & PET National
University Hospital, Rigshospitalet, University of Copenhagen,
Blegdamsvej 9, DK-2100 Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
