# Developing Role of Diagnostic Imaging and Nuclear Medicine Applications in Pancreatic Tumors

### Message from the Guest Editors

Besides conventional imaging modalities such as computed tomography (CT) and magnetic resonance imaging (MRI), molecular imaging with positron emission tomography (either PET/CT or PET/MRI) represents a powerful tool for detecting and evaluating pancreatic tumors in diverse disease settings. In this Special Issue we will contribute by collecting reviews or original data about theragnostic molecular imaging, in terms of both diagnosis (e.g., FDG, 68Ga-DOTA-peptides, and other radiopharmaceuticals for PET, 111In-Octetotide or similar tracers for SPECT, MRI and endoscopy) and therapy (e.g., 177Lu/90Y-DOTA-peptides).

## About the Journal

### Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
