submissions:  
**closed (30 June 2022)**

### Message from the Guest Editors

Dear Colleagues,

The purpose of this Special Issue is to present current research that tackles the role of lipids in disease development and/or treatment. Current challenges to treat diseases such as cancer, neurological diseases, and cardiovascular diseases involve potent lipid mediators including eicosanoids and platelet-activating factors or changes of cellular lipid compositions. With the advances in ‘omics’ technologies and research, there is potential to discover novel lipid biomarkers and lipid mediators with pro-resolving effects, such as resolvins and protectins, and design new treatments.

This Special Issue will provide an open access opportunity to publish research work and review articles related to recent advances in understanding the role of lipids in health and disease and will hopefully present new molecular insights for developing potential therapeutic treatments as well as better patient diagnostic and disease prevention strategies.

Dr. Ronan Lordan

## Message from the Editor-in-Chief

*Diseases* is an international, peer-reviewed, open access, multidisciplinary journal that focuses on the latest outstanding research concerning diseases and conditions. Research articles, reviews, and other contents are released on the Internet immediately after acceptance. This journal aims to cover international conferences and symposia as new targets.

*Diseases* is increasingly gaining acceptance and visibility within scholars, and after only a few years of life, *Diseases* is now also covering specific topics with dedicated special issues. We would be pleased to welcome you as one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, ESCI (Web of Science), PubMed, PMC, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (Medicine, Research and Experimental)
