Deadline for manuscript  
submissions:

**closed (30 June 2019)**

### **Message from the Guest Editor**

Dear Colleagues,

Nutritional research has become important in appetite regulation with improvements in health relevant to healthy diets and the prevention of chronic disease and Alzheimer's disease. The origins of metabolic diseases may involve the dysregulation of hormones, nuclear receptors, and neuropeptides in the brain and peripheral tissues. Nutritional research is now essential to promote mitochondrial biogenesis that is connected to appetite regulation in both chronic and neurodegenerative diseases. The links between appetite dysregulation, endocrinology, and metabolism implicate the peptide apelin and the nuclear receptor Sirtuin 1 (Sirt 1) to be defective and involved in NAFLD and Alzheimer's disease. Appetite regulation is now critical to the prevention of brain disorder therapy that may involve the reversal of synaptic plasticity defects that link diabetes to neurodegenerative diseases.

## Message from the Editor-in-Chief

*Diseases* is an international, peer-reviewed, open access, multidisciplinary journal that focuses on the latest outstanding research concerning diseases and conditions. Research articles, reviews, and other contents are released on the Internet immediately after acceptance. This journal aims to cover international conferences and symposia as new targets.

*Diseases* is increasingly gaining acceptance and visibility within scholars, and after only a few years of life, *Diseases* is now also covering specific topics with dedicated special issues. We would be pleased to welcome you as one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, ESCI (Web of Science), PubMed, PMC, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (Medicine, Research and Experimental)
