Message from the Guest Editor

Dear Colleagues,

Neuro-psychiatric disorders are an important cause of poor quality of life, disability, and premature mortality. The pathophysiological bases of these disorders show continuous challenges, and different aspects within the same disorder appear quickly in the field of biomedical sciences. The complexity of these disorders needs the expertise of a multidisciplinary team to provide the best healthcare for these patients.

This Special Issue wishes to shed new light on this exciting and insightful field of research from a multidisciplinary perspective, and reflects the interplay between neurological and psychiatric sciences, with other health sciences at the leading edge of this growing research field, which intensively suggest new opportunities for improving diagnosis and care, or to prevent adverse outcomes. In the Special Issue, the readership will find relevant research carried out by several health care professionals and researchers with extensive knowledge on clinical settings and is intended to address new issues of interest of specific importance to research and clinical practice. Welcome to contribute free of charge.
