Cancers of the Genitourinary System: Pathophysiology, Modeling, and Treatment

Message from the Guest Editors

Genitourinary tumors are common neoplasms that include prostate cancer, kidney cancer, bladder cancer, testicular cancer, and cancers of the penis. With the rapid advancement in the medical field and the wide use of next-generation sequencing techniques to understand cancer, researchers and physicians are moving away from a “one size fits all” strategy in treating the disease to specifically treat every patient. It is thus crucial to decipher the molecular and cellular mechanisms underlying the initiation and progression of those intractable cancers and accordingly identify the unique biomarkers associated with them to aid in diagnosis and improve prognosis. This issue focuses on research and experiences related to cancers of the genitourinary system. This may include deciphering the mechanisms underlying the initiation and progression of genitourinary cancers, including: pathophysiology; molecular, and cellular mechanism identification of novel cancer biomarker therapeutic targets, etc. We invite researchers in molecular pathology, genitourinary pathology, and other fields of cancer research to submit high-quality reviews related to the issues in this area.

About the Journal

Message from the Editorial Board

Diseases is an international, peer-reviewed, open access, multidisciplinary journal that focuses on the latest outstanding research concerning diseases and conditions. Research articles, reviews, and other contents are released on the Internet immediately after acceptance. This journal aims to cover international conferences and symposia as new targets.

Diseases is increasingly gaining acceptance and visibility within scholars, and after only a few years of life, *Diseases* is now also covering specific topics with dedicated special issues. We would be pleased to welcome you as one of our authors.

Editors-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Prof. Dr. Omar Cauli

Frailty and Cognitive Impairment—FROG Research Group, University of
Valencia, 46010 Valencia, Spain

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), PubMed, PMC, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 22.7 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
