Coral Reef Biogeography, Ecology and Conservation under Climate Change and Human Disturbance

Message from the Guest Editor

Hard corals are the primary constructors of tropical coral reefs. Hard corals and coral reefs are impacted by a wide variety of human threats, including climate change, which is predicted to nearly extirpate them in the coming decades. Coral reefs are the most diverse shallow-water marine ecosystem and provide huge ecosystem services to humans. Corals actually have relatively low diversity compared with some other groups of organisms on coral reefs. The Indo-Pacific is the world's largest biogeographic zone, in which the majority of coral species can be found. In spite of many decades of work on coral species and a few decades of work on coral biogeography, there is still much we do not know about coral diversity and biogeography. It appears that coral diversity is considerably higher than that currently recognized, and DNA sequencing can hopefully provide an independent guide as to what groups of individuals comprise a species, but most DNA results have conflicted with morphological characteristics.

About the Journal

Message from the Editor-in-Chief

Diversity (ISSN 1424-2818) is a scholarly journal that covers all areas of diversity research. Our distinguished editorial board and refereeing process ensures the highest degree of scientific rigor for publishing. Original research articles and timely reviews are released online, with unlimited free access.

We invite papers and reviews on multidisciplinary topics of diversity that bridge organismic diversity (systematics, biodiversity, phylogeny, population genetics, and evolution) and molecular diversity (phytochemistry and biophysics).

Editor-in-Chief

Prof. Dr. Michael Wink

Institute of Pharmacy and Molecular Biotechnology, Heidelberg
University, Im Neuenheimer Feld 329, D-69120 Heidelberg, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biodiversity Conservation) / CiteScore - Q1
(Agricultural and Biological Sciences (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
