Integrating Spatial Phylogenetic, and Taxonomic Approaches to Understand Plant Biodiversity

Message from the Guest Editors

This Special Issue calls for research that integrates spatial, phylogenetic, and taxonomic data to achieve a deeper understanding of **plant biodiversity**. We invite submissions employing novel spatial phylogenetic methods to explore patterns of diversity, endemism, and evolutionary turnover.

Key Topics Include:

- Spatial phylogenetic patterns in plant communities
- Biogeography of phylogenetic diversity and endemism
- Relationships between taxonomic, phylogenetic, and functional diversity
- Processes shaping biodiversity across spatial scales
- Conservation applications of spatial phylogenetics
- Advances in analytical methods and metrics

We welcome your contributions.

About the Journal

Message from the Editor-in-Chief

Diversity (ISSN 1424-2818) is a scholarly journal that covers all areas of diversity research. Our distinguished editorial board and refereeing process ensures the highest degree of scientific rigor for publishing. Original research articles and timely reviews are released online, with unlimited free access.

We invite papers and reviews on multidisciplinary topics of diversity that bridge organismic diversity (systematics, biodiversity, phylogeny, population genetics, and evolution) and molecular diversity (phytochemistry and biophysics).
