Marine Species Chemical Ecology

Message from the Guest Editors

The use of chemical signals by animals is widespread in all environments, including marine habitats, where changes in behavior after the detection of waterborne compounds have been extensively documented for many species and in different behavioral contexts. Marine animals rely on chemical cues for spatial orientation, social communication, parental cares, larval settlement, avoidance of predators or injured conspecifics, identification of suitable habitats for reproduction, sex recognition and localization of food resources. Marine animals with external fertilization may also use chemicals in breeding aggregations and spawning synchrony strategies to enhance the probability of gamete encounters. Therefore, understanding the roles of marine chemicals and the sensory systems providing animals with information about them gives us insight into the chemical ecology of different species. This Special Issue provides a platform to highlight new research findings by further advancing the frontiers of knowledge regarding the chemical ecology of marine animals from a wide range of taxa. We will accept reviews as well as short and long research papers that cover these topics.

About the Journal

Message from the Editor-in-Chief

Diversity (ISSN 1424-2818) is a scholarly journal that covers all areas of diversity research. Our distinguished editorial board and refereeing process ensures the highest degree of scientific rigor for publishing. Original research articles and timely reviews are released online, with unlimited free access.

We invite papers and reviews on multidisciplinary topics of diversity that bridge organismic diversity (systematics, biodiversity, phylogeny, population genetics, and evolution) and molecular diversity (phytochemistry and biophysics).

Editor-in-Chief

Prof. Dr. Michael Wink

Institute of Pharmacy and Molecular Biotechnology, Heidelberg
University, Im Neuenheimer Feld 329, D-69120 Heidelberg, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biodiversity Conservation) / CiteScore - Q1
(Agricultural and Biological Sciences (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
