

Special Issue

The Morphological Diversity and Evolution of Pollen

Message from the Guest Editor

Pollen grains are the male gametophytes of flowering plants. Although they are very simple organisms, they display a wide range of variation in aperture type, pollen wall architecture, pollen unit and grain shape and size, etc. The variation exists at different systematic scales and is observable in fossils to indicate evolutionary trends. Hence, pollen morphological data have proved to be crucial to the resolution of relationships in angiosperms. This Special Issue aims to collect research articles, short communications, and review articles on recent contributions to the diversity and evolution of pollen morphology.

About the Journal

Message from the Editor-in-Chief

Diversity (ISSN 1424-2818) is a scholarly journal that covers all areas of diversity research. Our distinguished editorial board and refereeing process ensures the highest degree of scientific rigor for publishing. Original research articles and timely reviews are released online, with unlimited free access.

We invite papers and reviews on multidisciplinary topics of diversity that bridge organismic diversity (systematics, biodiversity, phylogeny, population genetics, and evolution) and molecular diversity (phytochemistry and biophysics).

Editor-in-Chief

Prof. Dr. Michael Wink

Institute of Pharmacy and Molecular Biotechnology, Heidelberg
University, Im Neuenheimer Feld 329, D-69120 Heidelberg, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biodiversity Conservation) / CiteScore - Q1
(Agricultural and Biological Sciences (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.6 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
