Quantifying Biodiversity: Methods and Applications

Message from the Guest Editor

Biodiversity is a comprehensive concept of large amounts of ecological or biological information. In addition, the term *biodiversity* can be closely related to ecological conservation, monitoring, and management. As such, under different contexts of sampling schemes or model assumptions, a lot of biodiversity indices have been developed for simply and objectively measuring the concept quantitatively. However, it is not easy to directly assess biodiversity using observations or survey data in field work. Instead, in order to accurately and reliably quantify and infer assemblage biodiversity, proposing well-developed statistical toolkits is always welcome and essential in practical applications and monitoring ecosystems. *Diversity* welcomes submissions of reviews as well as practical, modeling or observational studies to this Special Issue on topics including but not limited to: formulating new biodiversity indices, proposing novel statistical methods of well-known typical indices, creating novel sampling methods, and exploring new findings in biodiversity assessment and comparison.

About the Journal

Message from the Editor-in-Chief

Diversity (ISSN 1424-2818) is a scholarly journal that covers all areas of diversity research. Our distinguished editorial board and refereeing process ensures the highest degree of scientific rigor for publishing. Original research articles and timely reviews are released online, with unlimited free access.

We invite papers and reviews on multidisciplinary topics of diversity that bridge organismic diversity (systematics, biodiversity, phylogeny, population genetics, and evolution) and molecular diversity (phytochemistry and biophysics).

Editor-in-Chief

Prof. Dr. Michael Wink

Institute of Pharmacy and Molecular Biotechnology, Heidelberg
University, Im Neuenheimer Feld 329, D-69120 Heidelberg, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biodiversity Conservation) / CiteScore - Q1
(Agricultural and Biological Sciences (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
