Recent Contributions of Female Scientists to Thermodynamics

Message from the Guest Editor

Since the beginning of this discipline, the roles and contributions of women in the development of classical thermodynamics have never been clearly presented. Despite the large number of scientific papers and books co-authored by women during the 20th century, not many of them are known, even to experts. This runs contrary to the contributions woman make in chemistry-related areas of thermodynamics, which are better known because of the processes named after them. Thermodynamic research is often “an idea” that can become reality through a deep evaluation, optimization, and practical realization. The purpose of this Special Issue is to emphasize the research activities of female scientists (lead researcher or co-author) in the field of thermodynamics. MDPI and /Dynamics/ dedicate this project to the International Women’s Day. On behalf of all colleagues involved in this project, I would like to send you my best wishes for your health, success, and happiness. We encourage our female colleagues to consider contributing to this Special Issue. If so, please send a short abstract to Prof. Morosuk before submitting the paper.

About the Journal

Message from the Editor-in-Chief

Dynamics aims to cover the research needs of scholars working mainly with physical and chemical processes and thus focuses on the study of systems in these two fields, presenting both theoretical and experimental results. Of particular interest are papers detailing new results concerning dynamics theory regarding differential equations (ordinary differential equations, stochastic differential equations, fractional order systems, nonlinear systems, and chaos) and their discrete analogs, which consist of the mathematical base of the presented physical and chemical models. *Dynamics* will also publish papers concerning computational results and applications of physical and chemical processes in biology, engineering, robotics, and the other sciences, as well as papers in other areas of mathematics that have direct bearing on the dynamics of these kinds of processes.

Editor-in-Chief

Dr. Christos Volos

Laboratory of Nonlinear Systems, Circuits & Coplexity (LaNSCom),
Department of Physics, Aristotle University of Thessaloniki, GR-54124

Author Benefits

High Visibility:

indexed within ESCI (Web of Science), Scopus, EBSCO, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14 days after submission; acceptance to publication is undertaken in 5.6 days (median values for papers published in this journal in the second half of 2024).

Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and reviewer names published annually in the journal.
