

Special Issue

The Global Burden of Burns, Burn Care Management and Outcome

Message from the Guest Editor

Burns can lead to drastic consequences of morbidity and mortality. Where preventive strategies have been adopted and adequate care is guaranteed, incidence and outcomes after burns have progressively improved, while in limited resource settings, they have not.

Research can contribute to reducing the burden of burns, identifying risk groups, analyzing management and outcomes, promoting systematic data collection.

Keywords

- burn injury
- low resource settings
- low- and middle-income countries
- burn care capacity
- traditional medicine
- delay in care
- surgery
- reconstruction
- contractures
- socio-economic factors
- equality
- burn registry
