

Special Issue

Industrial Clusters, Agglomeration and Economic Development

Message from the Guest Editor

Countries now face the challenge of how companies can drive innovation under the Fourth Industrial Revolution. The COVID-19 pandemic has made us realize that all countries across the globe require a "digital" economy as well as a "green" economy. Clusters, or agglomerations, are one of the most effective regional growth strategies for overcoming the current challenges. Its analysis can be performed from various angles, including organizational management, spatial economics, and sequencing economics. Other approaches to clusters and economic development are welcome. This Special Issue aims to publish original theoretical and empirical papers and/or case studies on various aspects of clusters.
