

Topical Collection

International Financial Markets and Monetary Policy

Message from the Collection Editor

Heightened geopolitical tensions, trade disputes, and unexpected events, such as the COVID-19 pandemic, have increased global economic uncertainty, making macroeconomic forecasting and policymaking more challenging. Rising income and wealth inequality pose significant challenges for macroeconomic stability, social cohesion, and policymaking. Addressing these disparities requires nuanced macroeconomic approaches. Researchers, policymakers, and market participants must navigate these complexities to ensure economic stability and sustainable growth. Therefore, the aim of this Collection is to disseminate important empirical and theoretical research questions concerning the connection between Macroeconomics, Monetary Economics, and Financial Markets, which might include (but is not limited to):

- Monetary policy transmission in times of uncertainty;
- Anchoring of inflation expectations;
- Digital currencies;
- Green central banking;
- Inequality;
- Contagion and spillovers;
- International coordination of monetary policy.
