

Special Issue

Exchange Rates: Drivers, Dynamics, Impacts, and Policies

Message from the Guest Editor

This Special Issue aims to gather empirical and theoretical papers that investigate exchange-rate-related issues in developing, emerging markets and advanced economies covering real exchange rate modelling (including the purchasing power parity, the Balassa–Samuelson effect, and the Dutch Disease), nominal exchange rate forecasting and modelling (e.g., monetary model to the exchange rate, target zones), central bank actual and verbal foreign exchange interventions, the connection between the exchange rate, trade, and current account, and the exchange rate–inflation nexus (e.g., exchange rate pass-through, inflation targeting in open economies).

Guest Editor

Dr. Balázs Égert
