Determinants of Cancer: Implications into the Quality of Life and Daily Life Activities

Message from the Guest Editors

The determinants of health involved in prevention and those involved in the follow-up of cancer patients are key to determining aspects of quality of life and the ability of cancer patients to carry out the various activities of daily life. From the point of view of prevention, acting on three principal factors—toxic habits, diet, and physical activity, and many more to avoid the development of an oncological diagnosis is essential. This call for papers is based on these two pillars: research that deals with the development of prevention programs and that is focused on these three management examples, and research that works actively in the management of the patient concerning implementing and improving their quality of life, as well as improving their ability to carry out daily life activities.

About the Journal

Message from the Editorial Board

The journal offers an integrating approach to the disciplines it addresses, highlighting the role of health as a transversal axis in educational and psychological processes, present in human development, throughout the life cycle. *European Journal of Investigation in Health, Psychology and Education* (ISSN 2254-9625) is a peer-reviewed scientific journal that publishes original articles and systematic reviews or meta-analyses related to research on human development throughout the life cycle. It is a journal of the University Association of Education and Psychology and is published monthly online by MDPI.

Editors-in-Chief

Dr. José Jesús Gázquez Linares
