Deadline for manuscript submissions:

closed (15 November 2022)

## **Message from the Guest Editors**

This Special Issue is being launched with the aim of reviewing the economic effects of the adoption of different initiatives (dismantling coal, nuclear, or conventional generation plants: electric-car deployment; development of power electronics; self-consumption; renewable energy integration; CO2 prices (ECTS); changes in consumer habits; big-data applications, etc.) in various aspects, both in the electricity markets (day ahead and ancillary services) and in the rest of the energy markets (gas and coal), and the environmental impacts on emission levels and ECTS prices, as well as, from a macroeconomic point of view regarding economic growth, the overall efficiency of the system and unemployment rates.

Topics welcome to this Special Issue include but are not restricted to the following:

- Economic analysis
- Electricity markets
- Environment
- Renewables
- Grid integration
- Electric vehicles
- Demand electrification
