Autonomous Navigation Systems for Unmanned Aerial Vehicles

Guest Editors:

Dr. Rodrigo Munguía

Department of Computer Science, CUCEI, University of Guadalajara, Blvd. Marcelino Garca Barragn 1421, C.P. 44430 Guadalajara, Jalisco, México

Prof. Dr. Antoni Grau

School of Industrial Engineering, Technical University of Catalonia (UPC, BarcelonaTech), E-08028 Barcelona, Spain

Deadline for manuscript submissions: closed (30 November 2021)

Message from the Guest Editors

Autonomous navigation is a fundamental necessity for any application involving unmanned aerial vehicles (UAV). The global positioning system (GPS) and inertial measurements units (IMU), or their fused variant, the inertial navigation systems (INS), represent the most common approaches for addressing the problem of UAVs navigation. Nevertheless, cluttered, and GPS-denied, environments still pose a considerable challenge. Moreover, GPS-based navigation can be unreliable in several scenarios where precision maneuvers are required.

Also, to control and navigate, UAVs require the use of several critical on-board sensors that can generate data enough to perform those tasks. The reading, treatment, processing, and understanding of this data in real time will be covered by this Special Issue.

Finally, depending on the UAV usage, specific sensors and actuators will be needed to carry out the operation of the UAV. With these specific sensors and actuators, UAV can be used for many real applications, not only to carry cameras and taking pictures or movies. The proposal and use of new actuators on-board is of great interest in the robotics community.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Flavio Canavero

Department of Electronics and Telecommunications, Politecnico di Torino, 10129 Torino, Italy

Message from the Editor-in-Chief

Electronics is a multidisciplinary journal designed to appeal to a diverse audience of research scientists, practitioners, and developers in academia and industry. The journal is devoted to fast publication of latest technological breakthroughs, cutting-edge developments, and timely reviews of current and emerging technologies related to the broad field of electronics. Experimental and theoretical results are published as regular peer-reviewed articles or as articles within Special Issues guest-edited by leading experts in selected topics of interest.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, Ei Compendex and other databases. **Journal Rank:** JCR - Q2 (*Physics, Applied*) / CiteScore - Q2 (*Control and Systems Engineering*)
