Deadline for manuscript
submissions:

closed (31 December 2021)

Message from the Guest Editors

Electrical energy systems must integrate equipment that allows the monitoring, measurement, control and follow-up of domestic and industrial systems within the concept industry 4.0. Smart grids are part of Smart Cities that use systems for street lights control, energy smart meters, renewable energies and distributed micro-generation, etc. For these applications, the use of IoT and low-power long-range wireless networks (LPWAN) is fundamental to facilitate all the necessary tasks in the Smart grids. The development and expansion of the electric vehicle requires its monitoring, the state of charge of the batteries, the available autonomy and other electrical parameters. In this sense, the use of long-range networks, such as LoRa and NB-IoT, provide the basis for the development of all these functionalities. All the features described above for Smart Cities, with households, industries and electric vehicles must be monitored at all times. In this sense, the development of monitoring and control applications using mobile devices is a fundamental tool in this type of system, which complements all the possibilities offered by the IoT.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Flavio Canavero

Department of Electronics and
Telecommunications,
Politecnico di Torino, 10129
Torino, Italy

Message from the Editor-in-Chief

Electronics is a multidisciplinary journal designed to appeal to a diverse audience of research scientists, practitioners, and developers in academia and industry. The journal is devoted to fast publication of latest technological breakthroughs, cutting-edge developments, and timely reviews of current and emerging technologies related to the broad field of electronics. Experimental and theoretical results are published as regular peer-reviewed articles or as articles within Special Issues guestedited by leading experts in selected topics of interest.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, Ei Compendex and other databases.

Journal Rank: JCR - Q2 (Engineering, Electrical and Electronic) / CiteScore - Q1 (Electrical and Electronic Engineering)
