Message from the Guest Editors

Dear Colleagues,

During the last decade, 5G technology has been developed and successfully commercialized for mobile communication networks. Still, 5G access technology has further challenges, as it is now evolving with convergence technologies. The topics of this Special Issue include but are not limited to:

- Sub- or above 6 GHz radio access technologies for 5G+
- V2X communication using mmWave links
- NOMA for 5G and beyond wireless networks
- THz communications for 5G+ eMBB
- Fog and MEC architecture for 5G access networks
- Machine learning aided Fog and MEC operation
- (Massive) MIMO for a 5G+ access network
- SDN-assist admission control in a 5G access network
- Multi-connectivity and co-existence in satellite/UAS and a 5G network
- Private 5G access network by dynamic spectrum access (DSA)
- Localization issue in indoor or city canyon.
