The main aim of this Special Issue is to seek high-quality submissions that highlight advances in control techniques for electric drives, address the implementation challenges, and the use in emerging fields. Topics of interest include but are not limited to the following:

- Control algorithms for power electronics converters;
- Adaptive control, robust control, predictive control, and sliding mode control;
- Sensorless control;
- Fault diagnosis and fault tolerant control;
- Control of electric drives in electric vehicles (EV)
- Control of electric drives in renewable energy systems;
- State and parameters estimation;
- Artificial intelligence (neural network, fuzzy logic, etc.) control applications.
